

**For Dengue fever, infectious disease;  
Stop wiggler emerging from eggs**

Antimicrobial  
Copper

# Copper Fiber **Wiggler Buster**

**Dengue fever, B-Encephalitis,  
Malaria, West Nile fever, etc.**

**Wiggler buster can prevent virus from  
spreading through mosquitoes.**

*Just place Wiggler buster in rainwater pit,  
water tank, water collecting pit, cesspit, etc,  
It's carefree!*

Hook it on the lid.(Leave a little space from the floor)

## Place of use

- Kindergarten, childcare center
- Hospital, nursing home
- Park, shrine
- Apartment, public facilities, etc

20ℓ Price per unit ¥ 4,000

Two (2) kinds of safe ion,  
Water sterilizing, deodorizing, stop alga from growing,  
20 pcs/1 box (shipping charge not included)

Mosquito  
Mosquito

*The power of copper which controls mosquito growth!*

Mosquitoes annoy us in the summer. Mosquito bites are not only itchy but they are also threatened for bringing infectious diseases.

Experiment results show that copper works effectively for controlling the mosquito generation.

First of all, we put the larvas of most common tiger mosquito in both copper container and glass container. The ones in the copper container all died, never emerged. On the other hand, ones in the glass container, 90% of them emerged and became mosquitoes.

Next, we put the larvas of *Culex pipiens molestus* which live in the basement of the buildings all the year around into the glass container together with the thin copper wire, then again they all died. Yet the ones in the container with no copper wire, 80% of them emerged and became mosquitoes.

From the water in the container used for this experiment, copper ion was detected and the small amount of metal function of copper is considered to be the cause of controlling mosquitoes' generation.

Emergence of *Culex pipiens molestus* larva

## Some other applications!
