

Copper fiber Sapuri-yu (Supplemental bath), Mineral Ion Bath, Luxurious Bath

Antimicrobial
Copper

When a new material, copper fiber (tombac fiber) is placed in water or hot water, a small amount of zinc which is essential mineral for human, animal and plant keeps eluting.

Mineral zinc ion has the following functions in the water:

- 1.Remove the residual chlorine from the tap water (ion reaction and the effect on surface area)
- 2.Deodorizing
- 3.reduce the slime
- 4.Agglutinate and precipitate the organic substances contained within the water (zinc hydroxide) and increase transparency
- 5.Having an antibacterial spectrum and control the Escherichia coli and Legionella

■The reason for recommending the “Sapuri-yu (Supplemental Bath)”

Human beings all have smaller appetite as they get older and they become lack of nourishment. As a result, their bones and muscles become thin and the visceral function fails, their immune system weaken and the skin become very thin.

Mineral Zinc Ion Bath, the water is mild due to the residual chlorine is removed from the water. Because the hot water can keep its antibacterial activity, it can not only keep the skin hygienic while bathing but also small amount of mineral zinc will yield a good effect on the skin.

■Skin and Zinc

Since ancient times, zinc ointment has been used for scratches and burns on the skin. It is known among the researchers and dermatologists that high amount of zinc get concentrated under the burned skin help restoring the burned skin, therefore, the zinc and skin relation is very important.

Atopic dermatitis and the pore immunity skin problem can breed staphylococcus and easy to become unhygienic. Also, baby powder is made from zinc oxide.

Now you know that Mineral Zinc Ion Bath can produce the safe warm water, the way that the bathwater always should be.

As you can see, zinc is not only the essential mineral but also work effectively especially in the water.
